

HTML + CSS Premium Notes (2026 Real-World Dev)

HTML = Structure (Core)

- Use semantic tags (header, nav, main, section, article, footer)
- Maintain heading hierarchy (h1 → h6)
- Forms & navigation are essential

CSS = Layout + UI

- Box Model: margin, padding, border
- Always use box-sizing: border-box
- Focus on layout + readability

Units (Industry Standard)

- Layout → % + max-width (px)
- Text/Spacing → rem
- Small elements → px

Layout System

- width: 100%
- max-width: 1200px
- margin: auto
- This pattern is used in almost all websites

UI Design Principles

- Spacing = clean UI
- Typography defines readability
- Use limited colors
- Maintain consistency everywhere

Flexbox (Core Layout Tool)

- display: flex activates layout

- justify-content = horizontal control
- align-items = vertical control
- gap for spacing
- flex-wrap for responsiveness
- flex:1 for equal items

Image Handling

- Normal → width 100%, height auto
- Cards → fixed height + object-fit: cover

Responsive Design

- Design for mobile first thinking
- Avoid fixed sizes
- Use flexible layouts

Must Build Projects

- Business Landing Page
- Contact Form
- Card Layouts
- Responsive UI

Developer Mindset

- Learn → Build → Repeat
- Projects > Theory
- Consistency beats intensity
